LUTKEXCHSPRING Exchange Studies (Spring Semester)

LUTKEXCHSPRING Exchange Studies (Spring Semester)

CURRICULUM PERIOD 2025-2026

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	min 20 cr
Languages	English
Grading scale	Grading scale for degrees (distinction)
Content approval required	no
Locations	⚠ [information missing]
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	Lappeenranta-Lahti University of Technology LUT 100%
Responsible persons	Tarja Pettinen, Responsible teacher Armi Rissanen, Responsible teacher Jonna Naukkarinen, Responsible teacher Minna Loikkanen, Responsible teacher Annukka Ilves, Administrative person Suvi Tiainen, Responsible teacher
Degree programme type	Bachelor's Degree
Degree titles	Bachelor of Science (Technology)
Study field	Fields of education (Ministry of Education and Culture), Business, administration and law
Education classification	632101 Bachelor of Science (Economics and Business Administration), Business Economics

Content description

EN: Whether you are planning to stay for a semester or a year, the exhange students coming to LUT have a proud history of enjoying themselves.
At LUT students can easily combine technology and business studies under the same roof. LUT will offer a large number of courses in many academic fields and the choice is yours! However, in order for you to make the most of your stay, please be proactive and take responsibility for your study plan and your studies.

Most of the courses are intended for Master's level or final year Bachelor students, but there are also choices available for those in their Bachelor studies. As the majority of courses are taught at the Master's level, students are expected to have bachelor level knowledge of relevant subjects.

The courses you include in your learning agreement may be subject to chance. A learning agreement is not considered as a course registration.
When starting your studies at LUT you need to enroll to courses and exams.

It is possible to study approximately 30 ECTS credits per one semester. Minimum number of credits per semester is 20.

We at Lappeenranta-Lahti University of Technology (LUT) invite you to join our high-standard and cross-cultural education and research community.

More information about exhange study experience at LUT www.lut.fi/exhange

FILTERED COURSES

A380A0131 Business Relationships in International Value Networks

A380A0131 Business Relationships in International Value Networks

Abbreviation: A300CE15

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LBS, Business Administration 100%
Responsible persons	Axel Zehendner, Responsible teacher Suvi Tiainen, Administrative person
Study level	Intermediate studies

Study field	Fields of education (Ministry of Education and Culture), Business, administration and law

Prerequisites

EN: B.Sc. (Econ. ; Bus. Adm.) General studies

Learning outcomes

EN: The aim of the course is to familiarize students with different business relationships in international value networks, management of relationships and networks, and characteristics of supplier relationships and collaborative networks.
Upon completion the course students are able to

- understand the main concepts and theoretical backgrounds of collaboration and networks

- analyze the benefits and challenges of relationships and networks

- define supplier relationships

- participate in the development of supplier supplier relationships.

Content

EN: - The concepts and theories of collaboration and networking
- The benefits and challenges of collaboration

- Management of collaboration and networks, and supplier relationship management

Additional information

EN: Course is available for following students:

- LUT Business School students
- exchange students in business studies
- LAB business degree students
- Engineering students with a minor in business studies

The course is organized two times in an academic year: period 2 and period 4.

Moodle-based online course.

No contact teaching: so the course does not exist in TimeEdit /timetable) The teacher contacts the students every week via Moodle messages.

NB! After being accepted to the BRIVN course especially exchange students must make sure that they use LUT email and can receive Moodle messages, which is essential for completing the course.

Please be informed that if you miss the deadline for enrolling a group for the case assignment in Moodle, you cannot continue the course. The enrolling period is one week from the beginning of the course.

***

The course is related to UN's Sustainable Development Goals (SDG): 17 partnership for the goals.

Study materials

EN: Selection of journal articles and assigned readings, teaching videos and presentations.

A130A0551 Organizational Behaviour

A130A0551 Organizational Behaviour

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LBS, Business Administration 100%
Responsible persons	Anna-Maija Nisula, Responsible teacher Suvi Tiainen, Administrative person
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Business, administration and law

Learning outcomes

EN: The goal of the course is to familiarize students with the organizational behavior as a theoretical phenomenon. The course focuses on human behavior, factors affecting human behavior and consequences of human behavior in organizations.
After completing the course students should be able to:

- define the key concepts of organizational behavior and identify these concepts by definition

- understand and describe the key theoretical entities that are composed by the association of the basic concepts.

Content

EN: The course focuses on human behavior in organizations, addressing it as a phenomenon at the individual, team, and organizational levels, all of which are interconnected. At the individual level, central themes include personality, psychological capital, values, perceptions, decision-making, attitudes, motivations, and moods/emotions. At the group or team level, central themes revolve around team or group management, group dynamics, power dynamics, politics, conflicts, and negotiation strategies for team behavior. At the organizational level, central themes involve organizational structure, culture, and change management. Since groups and organizations are comprised of individuals, it's crucial to understand individual behaviors, which influence the behaviors of other individuals (groups and organizations) and vice versa. Group and organizational factors also influence individual behavior.

Additional information

EN:
This course is on-line course and emphasizes students'; self-directed learning via Moodle assignments

Study materials

EN: 1. Robbins, S.P. & Judge, T. A and Campbell. (2010). Organizational Behaviour. Edition, New Jersey; Pearson/Prentice Hall.
2. Materials announced by the lecturer.

A130A0620 Basics in MS Excel for Business Students

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English
Grading scale	Pass-Fail
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LBS, Business Administration 100%
Responsible persons	Sanna Heinänen, Responsible teacher Suvi Tiainen, Administrative person
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Business, administration and law

Prerequisites

EN: No preliminary studies required. Basic knowledge of MS Excel recommended.

Learning outcomes

EN: By the end of the course, students are able to use and develop basic functions for data analysis relating to business studies and needs.

Content

EN: The course is based on independent study and can be carried out any time during the academic year. During the course, students are learning the basics of MS Excel for business studies. The course includes self-learning videos and documents as well as web-based exercises. The topics include formatting, drawing graphs, basic mathematic formulas, lookup formulas and working with pivot tables and dashboard. The course does not require preliminary studies. The basic knowledge of MS Excel recommended.

A380A0400 Professional Selling

A380A0400 Professional Selling

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5

University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LBS, Business Administration 100%
Responsible persons	Jarkko Niemi, Responsible teacher Suvi Tiainen, Administrative person
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Business, administration and law

Learning outcomes

EN: Students will learn
- to critically evaluate strategies related to international marketing and sales management

- to understand the process of personal selling in industrial marketing

- to evaluate the impact of business decisions and administrative practices

- to analyze managerial challenges in international marketing environment

- to apply relevant business skills

Content

EN: This course provides an introduction to personal selling and modern sales management within the international business-to-business (B2B) environment. By the end of the course, students will have honed their personal selling skills, gained an understanding of sales management dynamics in a B2B context, and applied sales strategies in a competitive simulation. The course is structured into two main parts: the first part focuses on personal selling and professionalism in sales, culminating in sales negotiation role plays. The second part focuses on modern sales management, featuring a computer-based simulation game. Students' performance will be evaluated through a combination of assignments (30 %), participation in role-plays (20 %), and a final exam (50 %). The skills and knowledge acquired on this course are directly applicable to careers in sales, marketing, and business management, but also to many other work-life contexts.

Additional information

EN: The course is related to UN's Sustainable Development Goals (SDG): 3 good health and well-being, 8 decent work and economic growth, 9 industry, innovation and infrastucture

Study materials

EN: Assigned readings, lectures, and sales management simulation game.

Study field	Fields of education (Ministry of Education and Culture), Business, administration and law

Learning outcomes

EN: After the course, the students will have a general understanding of statistics and fundamentals of statistical inference, will be able to apply the basic statistical tests to analyse quantitative data, and will be able to use statistical software when describing data and applying the basic statistical analysis methods.

Content

EN: The basic concepts and issues in statistical inference. Sampling. Graphical and numerical description of data. Use of probability distributions. Parameter estimation and statistical testing. The basic tests to analyze quantitative data, and properly selecting the appropriate tests. Use of statistical software package.

Additional information

EN: Course is only available for students who are studying in Bachelor's Programme in Sustainable International Business.

A380A0500 Introduction to Corporate Social Responsibility and Sustainability

A380A0500 Introduction to Corporate Social Responsibility and Sustainability

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LBS, Business Administration 100%
Responsible persons	Pasi Heikkurinen, Responsible teacher Suvi Tiainen, Administrative person
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Business, administration and law

Learning outcomes

EN: This course aims to familiarize the students with the basics of corporate social responsibility (CSR) and sustainability, including common critiques of these concepts as well as their potential to achieve positive change. During the course, students will actively learn about and reflect on various sustainability issues and topics affecting businesses operating in a global environment, and possible ways for companies to address these issues through CSR and sustainability strategies, practices and interactions with stakeholders. Guest lectures and class exercises give the students an opportunity to apply their knowledge to actual business practice. Finally, students can improve their professional skills (e.g. communication and interaction skills) during the course through class discussions and group assignments.
Upon completion of the course, students should be able to:

1) Understand and critically examine key concepts and frameworks related to CSR and sustainability.

2) Recognize and assess various environmental, social, economic and ethical issues caused by, and affecting, companies operating in a global context.

3) Distinguish and analyse various types of CSR and sustainability strategies, practices and other ways of addressing sustainability issues.

4) Apply theoretical frameworks and research findings related to CSR and sustainability to real-life phenomena and business practice.

5) Produce CSR and sustainability-related texts and materials.

Content

EN: CSR and sustainability frameworks and concepts, environmental, social, economic, and ethical issues, CSR and sustainability strategy, CSR and sustainability practice, activism, reputation, corporate crises, communications, governance, digitalization, globalization, supply chain sustainability, sustainable investing, and cross-sector interactions.

Additional information

A380A0310 Services Marketing and Customer Experience Management

A380A0310 Services Marketing and Customer Experience Management

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr

Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LBS, Business Administration 100%
Responsible persons	Heini Vanninen, Responsible teacher Suvi Tiainen, Administrative person
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Business, administration and law

Prerequisites

EN: A130A0010 Markkinoinnin perusteet or equivalent basic marketing course.

Learning outcomes

EN: The aim of the course is to provide the students with the knowledge of most central issues of services marketing and customer experience management. After completion of the course the students are able to:
- Identify the key concepts and issues related to services marketing and how the nature of services affects marketing activities
- Demonstrate how services can be designed according to the needs of customers
- Plan service blueprints and understand services marketing from a holistic viewpoint, including the background work and processes that are needed to create and deliver an experience to the customer
- Analyze and audit existing services marketing processes by using the principles of service design

Content

EN: Foundations for services marketing (e.g. nature of services, services marketing mix, service design). Understanding customers and customer journey. Aligning service design and standards, service quality. Delivering and performing service, managing service promises.

Additional information

EN: Lectures in classroom.

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LBS, Business Administration 100%

Responsible persons	Sina Mortazavibabaheidari, Responsible teacher Daniel Stabler, Responsible teacher Suvi Tiainen, Administrative person
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Business, administration and law

Recommended prerequisites

A380A7001 Introduction to International Business

Learning outcomes

EN: After taking the course the student should be able to:
· understand and apply relevant theories in the context of international business practice

· discuss how the practice of international business can influence the grand challenges our world is facing;

· understand how business scholars can influence the practice of international business;

· evaluate international business challenges that companies face and offer practical recommendations;

· retrieve and analyze international business data to facilitate managerial decision-making

Content

EN: This course covers practical challenges faced by international business enterprises including sustainability, cross-cultural and social issues, internationalization, innovation and entrepreneurship.

Additional information

EN: The course is related to UN's Sustainable Development Goals (SDG):8 decent work and economic growth,11 sustainable cities and communities, 12 responsible consumption and production,17 partnership for the goals

Study materials

EN: Study materials including journal articles from magazines such as Harvard Business Review and MIT Sloan Management Review as well as practical business cases are made available on the course Moodle page.

Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LBS, Business Administration 100%
Responsible persons	Tanja Karppinen, Responsible teacher Suvi Tiainen, Administrative person

Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Business, administration and law

Learning outcomes

EN: By the end of the course, students will know why it is important to understand and appreciate cultural differences both in business and especially private life. Students will be able to explain the basic concepts of intercultural communication by the main course themes: cultures and communication, verbal and nonverbal communication, national stereotypes, intercultural sensitivity, cross-cultural interaction, culture shock, adaptation, expatriate assignments. Students will be able to describe themselves as an intercultural communicator, recognize symptoms of culture shock in their own life and especially know how to make intercultural adaptation process easier.

Content

EN: The purpose of the course is to develop students' abilities to understand and appreciate cultural differences both in business and especially private life.
- cultures and communication
- verbal and nonverbal communication
- national stereotypes
- intercultural sensitivity
- cross-cultural interaction
- culture shock
- adaptation
- intercultural effectiveness
- expatriate assignments

Additional information

EN: Contact teaching, learning and interaction in class.

Responsible persons	Gregory OShea, Responsible teacher Anna Sidorenko, Responsible teacher Suvi Tiainen, Administrative person
Study level	Intermediate studies

Study field	Fields of education (Ministry of Education and Culture), Business, administration and law

Prerequisites

EN: B.Sc. (Econ. ; Bus. Adm.) General studies

Learning outcomes

EN: The goal of the course is to give an understanding of how culture affects international business and advance students' global mindset by giving conceptual tools to increase their intercultural competence. After completing the course the students will be able to:

1. understand, define and discuss culture in general and in the context international business

2. explain cultural orientations towards time, space and context.

3. analyze and compare national cultures according to dimensions defined by studies of Hofstede, Trompenaars, and the GLOBE project.

4. reflect upon the relationship between culture, organizations and management.

5. evaluate the effects of the culture on various elements of international business, including marketing, negotiations and international teams.

Content

EN: The Concept of culture; dimensions of culture in business (Hall, Hofstede, Trompenaars, and the GLOBE project). The limits of globalization from a cultural perspective. The role of culture in communication, negotiations, and management. Cross-cultural issues in international teams. Standardization and adaptation in international marketing. Country cases of cultural differences .

Equivalences (free text field)

EN: BM40A0201 Tietojenkäsittelytieteen perusteet 6 op.

Learning outcomes

EN: By the end of this course, students will have a strong grasp of fundamental computing principles, including logic circuits, data representation, and algorithmic problem-solving. They will understand key components of computer architecture, such as the CPU, memory hierarchy (including RAM and cache), and the

basic machine cycle (fetch, decode, execute). Students will explore the design and function of the ALU, registers, buses, and control units, along with an introduction to assembly language and its role in low-level programming. Additionally, they will learn about theoretical models of computation, such as the Turing machine, to develop a deeper understanding of computational limits and efficiency. The student can outline applications of computer science methods within different fields and become acquainted with the field's educational, professional, and ethical questions.

Content

EN: Logic and computer: logic and discrete methods, logical circuits, computer architecture and limitations, machine language and system programs. Applications of computer science: programming paradigms, computational methods and intelligence, future aspects of computer science and technology. Computer science in education, research and as a profession, ethics.

Study materials

BL40A2011 Introduction to Cyber-Physical Systems

BL40A2011 Introduction to Cyber-Physical Systems

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	4 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Electrical Engineering 100%
Responsible persons	Pedro Juliano Nardelli, Responsible teacher Minna Loikkanen, Administrative person
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Prerequisites

EN: Scientific computing (python), basics of probability theory (random variables), and basics of Boolean algebra (logic gates)

Learning outcomes

EN: After the course, the student will be able to:
(1) understand what cyber-physical systems (CPSs) are;

(2) define uncertainty, information, network, decision-making and action as concepts;

(3) analyze CPSs as constituted by three necessary layers with three cross-layer operations;

(4) indicate enabling technologies of CPSs;

(5) design and assess the performance of simple CPSs, as well as critically discuss their social impact.

Content

EN: 1) Introduction to CPSs;
2) Core concepts: system, uncertainty, information, network, decision-making, and action;

3) The three-layers of CPSs;

4) Enabling information and communication technologies;

5) Examples of CPSs and their social impact.

Note: The use of generative tools (the so-called artificial intelligence or simply AI) are discouraged as the proposed tasks are designed for human learning; nevertheless the so-called AI applications can still be used according to general LUT policies.

Additional information

EN: The course is related to UN's Sustainable Development Goals (SDG): 3 good health and well-being; 7 affordable and clean energy; 9 industry, innovation and infrastructure; 11 sustainable cities and communities; 12 responsible consumption and production; 13 climate action.

Study materials

EN: Textbook, simulations in python (using deepnote platform) produced by the teachers and other suggested materials.

Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Electrical Engineering 100%
Responsible persons	Minna Loikkanen, Administrative person Pietari Puranen, Responsible teacher
Study level	Basic studies

Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Prerequisites

EN: Basics of C-programming

Equivalences (free text field)

EN: Replaces the course BL40A1811 Johdanto sulautettuihin järjestelmiin, 6 ECTS.

Learning outcomes

EN: The course is an introduction to embedded systems. Upon completion of the course the student will be able to: 1. identify different microprocessor types and peripheral components in embedded systems, 2. describe the operation principles of an embedded system and its peripheral components, 3. program and test applications to an embedded system by using C language.

Content

EN: Architecture of a microprocessor, instruction set and operation, microcontrollers, memories, peripherals, embedded system design, programming and development of applications, embedded system design examples.

Use of AI applications

Large language models can be used for deepening conceptual knowledge of course topics (for example when preparing for the exam) and as an aid for coding in the group assignment. However, each group must also be able to explain all code generated by artificial intelligence.

Additional information

EN: The course is related to UN's Sustainable Development Goals (SDG): 7 Affortable and clean energy, and 9 Industry Innovation and Infrastructure.

Study materials

EN: Lecture material based on F. Vahid, Tony Givargis, *Embedded System Design: A Unified Hardware/Software Introduction*

BL30A0001 Electric Circuits

BL30A0001 Electric Circuits

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	4 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Electrical Engineering 100%

Responsible persons	Minna Loikkanen, Administrative person Mehar Ullah, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: Upon completion of the course the student will be able to: 1. solve simple DC and AC systems with different calculation methods, 2. calculate with phasors, perform transformation from time domain to phasor domain and vice versa, 3. determine and explain the concept of impedance, 4. determine and explain the concepts of active power, reactive power, apparent power, 5. determine resonance frequency. 6. explain the concept of three-phase system.

Content

EN: Solution methods for DC and AC circuits: Ohm's law, Kirhhoff's voltage and current law, mesh current and node-voltage methods, phasor calculation, resonant circuits, sinusoidal quantities, symmetrical three-phase system, power calculation, star-delta and delta-star transformations.

Additional information

EN: In person lectures will only be in Lappeenranta campus. The lectures will be streamed for students in Lahti campus.
In the course will be held both English and Finnish exercise groups. Exercise groups in Lappeenranta and in Lahti.

Replaces the course BL30A0000 Sähköiset piirit, 4 ECTS.

BL30A0350 Electromagnetism and Circuit Analysis

BL30A0350 Electromagnetism and Circuit Analysis

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Electrical Engineering 100%
Responsible persons	Minna Loikkanen, Administrative person Cassia Santos Nunes Almeida, Responsible teacher Paula Immonen, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Prerequisites

EN: Recommended Prerequisites: BL10A0102 - Basics of Electrical Engineering (2 cr) and LES10A020 - Engineering Physics (3 cr).

Learning outcomes

EN: After completing the course, the student will be able to:

1. explain in your own words the key mechanisms of generation of electromagnetic radiation and the behavior of electromagnetic waves in a medium
2. explain Ampère's, Faraday's and Lenz's laws and the Lorentz force using examples and tell why these equations are needed in electrical engineering
3. explain the functions of antennas
4. explain what is meant by transmission line theory and how a transmission line is modeled using distributed parameters
5. explain how the current in a DC circuit containing inductance behaves in changing situations and what is meant by mutual inductance
6. explain why an electromotive force is induced in a conductor moving in a magnetic field and why a current-carrying conductor in a magnetic field is affected by a force
7. form analytical equations/calculate the magnetic flux, magnetic field strength and magnetic flux density of a magnetic circuit using basic equations
8. apply the theories presented in the course to solving simple electromagnetic problems and be able to evaluate the reasonableness of the results obtained

9. solve electrical circuits using systematic methods

10. define the basic methods used to describe transmission networks

11. explain the phenomena of change in electrical circuits and calculate changes in electrical circuits.

12. solve an electrical circuit voltage or current change in e.g. when a step-voltage is applied to the circuit.

Content

EN: Electromagnetic waves, basic phenomena of electromagnetism (magnetic force, magnetic field, electromagnetic induction), laws and applications, antennas, transmission lines and magnetic circuits. Systematic calculation methods for electrical circuits, such as the identification method and the Heaviside method. Laplace transformation and Laplace inverse transformation. Phenomena of change in electrical RLC circuits (voltage or current changes in the circuit). Methods to describe transmission networks.

Additional information

BL40A2601 Wind Power and Solar Energy Technology and Business

BL40A2601 Wind Power and Solar Energy Technology and Business

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	5 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Electrical Engineering 100%
Responsible persons	Minna Loikkanen, Administrative person Katja Hynynen, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Equivalences to other studies

BL40A2600 Wind power and solar energy technology and business

Learning outcomes

EN: Upon completion of the course the student will be able to:

1. model the process from wind energy into company turnover at the principle level,
2. identify and describe the key technologies related to wind power, the core business principles, environmental issues, energy policy and their development trends,
3. describe the mutual effects of wind power and electric power systems,
4. identify and describe the technologies related to solar power.,
5. describe the basic principle of photovoltaic cells,
6. estimate the performance and profitability of a PV plant.

Content

EN: Process modelling from kinetic energy of wind into company turnover and from solar radiation to turnover. Basic components of a wind power plant (turbine, gearbox, generator, power electronics, power electronics, tower), environmental effects of wind power, wind park planning, grid effects of wind power, economic feasibility of wind power under different circumstances, wind conditions in Finland. Solar energy technologies, operating principle of solar panels, PV solar power plant structure.
Company cooperation

There is visiting lecturer from a company in the course.

Use of AI applications

AI applications can be used in the course according to LUT's general AI-based tools policies.

9 industry, innovation and infrastructure

12 responsible consumption and production

13 climate action

Study materials

EN: The learning material is based on the latest trends on wind power and solar energy development, and is distributed to students in Moodle learning environment.

Completion method and assessment items	Recurrence	Credits
Method 1	Recurrence 1: 3. period-4. period	5 cr
Course Completion		5 cr

BL50A0021 Basic Electronics 1

BL50A0021 Elektroniikan perusteet 1

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English, Finnish
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Electrical Engineering 100%
Responsible persons	Mikko Kuisma, Responsible teacher Minna Loikkanen, Administrative person Mohammad Khan, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Equivalences (free text field)

EN: Replaces the course Elektroniikan perusteet B 3 ECTS.

Learning outcomes

EN: Upon completing the course, the student will be able to:

- Identify key passive and active electronic components and describe their applications.
- Differentiate between analog and digital electronics.

- Define the concepts of amplification and filtering.
- Explain the operation and basic physical structure of an ideal semiconductor diode.
- Describe the function and applications of transistors and discuss their significance, along with integrated circuits.
- Describe the operating principles of digital logic gates and identify common logic functions.
- Recognize the key stages and materials involved in manufacturing electrical apparatus.
- Apply Ohm's law, Kirchhoff's voltage and current laws, and the concept of electrical power to simple electrical circuits.

Content

EN: Analog and digital signals, resistors, capacitors and inductors, filtering, amplification, semiconductors, diodes and transistors, digital logic gates, introduction to electronics manufacturing technology.

Additional information

EN:

- Hybrid course organized both in Lappeenranta and Lahti (locally/remotely)
- Use of AI tools: According to the university regulations
- The course is related to the UN's Sustainable Development Goals (SDG): 7 affordable and clean energy.
- This course is given both in English (3. period) and in Finnish (2. period).

Study materials

EN: The learning material is based on the latest research and is available to students through Moodle.

BL50A0210 Introduction to EMC

BL50A0210 Introduction to EMC

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Electrical Engineering 100%
Responsible persons	Minna Loikkanen, Administrative person Tommi Kärkkäinen, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Equivalences to other studies

BL50A0201 Introduction to EMC

Learning outcomes

EN: Upon completion of the course the student will be able to:
1. recognise coupling mechanisms of electromagnetic interference (EMI) and describe the main principles to minimise EMI,
2. list the main effects of EMI and non-idealities of electrical components to the operation of an electrical apparatus,
3. describe the generation of electrostatic discharge (ESD) and the most important precautions in handling sensitive electronic devices and components.

Content

EN: Basic concepts of the electromagnetic compatibility (EMC). Conductive, capacitive, inductive and RF coupling of EMI. Non-idealities of components, electrostatic discharge (ESD), EMC legislation.
Use of AI applications

The use of AI tools to support learning is allowed and encouraged. AI must not replace the student's own efforts to learn. The general guidelines on the use of AI by LUT must be adhered to.

Additional information

EN: The course is related to UN's Sustainable Development Goals (SDG):
4 quality education,

7 affordable and clean energy,

12 responsible consumption and production.

Study materials

EN: Moodle material and web resources.
Moodle material is based on H.W. Ott: Noise Reduction Techniques in Electronic Circuits and other literature of the field.

BH40A0102 Basics of Renewable Energy Engineering

BH40A0102 Basics of Renewable Energy Engineering

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Energy Technology 100%
Responsible persons	Aki Grönman, Responsible teacher Minna Loikkanen, Administrative person
Study level	Basic studies

Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: Upon completion of the course the students will be able to: 1. describe the operation principle of various power plant types using renewable energy sources, 2. compare the benefits and disadvantages of power plants using renewable energy sources in relation to each other and conventional power plants, 3. understand the factors affecting power plant efficiencies, and 4. select suitable power plants for a given purpose. The course supports development of the following work life expertise and skills: Mathematics and natural sciences, practical application of theories, working independently, problem solving, information retrieval, time management and prioritizing tasks, analytical thinking skills.

Content

EN: Wind power, wind turbine types, water power, hydrogen economy and fuel cells, wave power, tidal power, biomass and biogas utilization, solar power, geothermal energy, principles and efficiency calculations of renewable energy power plants. The course is related to P2X theme.

Additional information

EN: Blended learning. The course is related to SDG 7: affordable and clean energy.

Study materials

EN: Lecture material in Moodle. Further material will be announced during lectures.

BH50A0220 Energy Systems

BH50A0220 Energy Systems

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	5 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Energy Technology 100%
Responsible persons	Minna Loikkanen, Administrative person Samuli Honkapuro, Responsible teacher Eeva-Lotta Apajalahti, Responsible teacher Falah Alobaid, Responsible teacher Gustavo de Almeida, Responsible teacher Goncalo Mendes, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Prerequisites

EN: Understanding of basic units.

Learning outcomes

EN: Upon completion of the course the student will be able to 1. recognize the world's energy resources and the most central factors affecting their utilization, 2. describe different types of energy production processes 3. recognize the equipment and terminology related to energy technology, 4. describe typical energy distribution, 5. recognize benefits and drawbacks of energy systems, 6. define economic constraints to energy processes, and 7. explain the fundamentals of the electricity markets, including price formation principles and role of the key actors, 8) identify societal impacts and constraints of energy futures. Completion of the course supports the development of the following generic competences for working life: Information retrieval, practical application of theories, working independently, written communication and time management and prioritizing tasks.

Content

EN: Global energy resources and energy demand. Energy conversion processes and process equipment. Energy transfer and distribution systems. Environmental and social impacts of energy technology. Economics of energy systems. Fundamentals of electricity market. Energy futures.
Company cooperation: Not applicable.

Use of AI applications:

AI applications can be used for understanding concepts and searching for information, taking into account the constraints of the AI in source criticism. Students must provide the answers in assignments by own produced text. Students are not allowed to present AI-generated text as their own.

Additional information

EN: Blended learning
SDGs: 7 affordable and clean energy, 11 sustainable cities and communities.

Study materials

EN: Celik, Serdar, Sustainable Energy Engineering Fundamentals and Applications, 2023; Boyle, Godfrey, Renewable Energy: Power for a Sustainable Future, 2012; Lecture notes.

Literature

Celik, Serdar, Sustainable Energy Engineering Fundamentals and Applications, 2023.

Boyle, Godfrey, Renewable Energy: Power for a Sustainable Future, 2012.

Lecture notes, distributed to students in Moodle.

Supporting material for the Lectures, distributed to students in Moodle.

Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Tweet text

EN: Location: Lappeenranta; Lahti. The course will be lectured every other week in Lappeenranta and Lahti. See time table and Moodle for details

Learning outcomes

EN: Understands the basic concepts of fluid dynamics and is able to apply them
Understands the basics of hydrostatics and is able to apply them
Understands the basic flow phenomena, equations describing them is able to apply them to solve problems
Understands the working principles of different flow meters and is able to choose a correct flow meter for each application
Is able to apply skills accumulated during the course for pipe flow and is able to solve pipe flow problems.
Completion of the course supports the development of the following generic competences for working life: mathematics and natural sciences, practical application of theories, working independently, problem solving, and time management and prioritizing tasks.

Content

EN: 1) Introduction: general overview of fluid mechanics in different fields of engineergin, definition of fluid and Newtonian fluids, shear stress in fluid flow surface tension.
2) Hydrostatics: hydrostatic pressure, standard atmosphere, buoyancy and stability of floating bodies.

3) Integral equations: continuity equation (conservation of mass), momentum equation, angular momentum equation, energy equation and Bernoulli equation.

4) Pipe flow: pressure loss in pipes, pipes in series and parallel, solving pipe flow problems, friction in pipe flow.

5) Flow measurements: overview of flow temperature and pressure measurements, flow velocity measurements, volume/mass flow measurement techniques.

Additional information

EN: The course is related to UN's Sustainable Development Goals (SDG): 6 clean water and sanitation, 7 affordable and clean energy

Study materials

EN: Course text book: White, F. M., Fluid mechanics. 5th ed.
Additional material in Moodle.

Alternative text books:Munson, B. R., Young, D. F., Okiishi, T.H.: Fundamentals of Fluid Mechanics. Bohl, W.: Teknillinen virtausoppi (Technische Strömungslehre): Durst: Fluid Mechanics: An introduction to the Theory of Fluid Flows (e-book)Krause: Fluid Mechanics : With Problems and Solutions, and an Aerodynamic Laboratory (e-book)

BH10A1900 Fundamentals of Energy Technology

BH10A1900 Fundamentals of Energy Technology

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	2 cr
Languages	English
Grading scale	Pass-Fail
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Energy Technology 100%
Responsible persons	Minna Loikkanen, Administrative person Ahti Jaatinen-Värri, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: Upon completion of the course a student 1. Understands the laws of thermodynamics and apply thermal properties, 2. understands the fundamentals of fluid mechanics and is able to solve typical problems, 3. Has understanding of the basics of heat transfer and is able to solve typical problems, 4. understands the different power generation technologies and is be able to calculate material and energy balances, and 5.
Independently study and follow progress of energy technology.
Completion of the course supports the development of the following generic competences for working life: know-how on own field, mathematics and natural sciences, practical application of theories, working independently,

Content

EN: Thermodynamics: basic concepts, thermodynamic properties, conservation equations, open system energy analysis, 1st and 2nd law of thermodynamics, thermodynamic cycles, Carnot efficiency, exergy.
Heat transfer: fundamentals, conduction, convection, heat exchangers, introduction to radiation.

Fluid Dynamics: hydrostatics, conservation of mass, linear momentum equation, Bernoulli equation, pipe flow.

Power plant engineering: Ideal and real Rankine cycles, gas turbine power cycle.

Bioenergy: Bioenergy in the world, biomass combustion, challenges in the biomass use, bioenergy in EU, future use of biomass.

Additional information

EN: The course is aimed for students who want to independently brush up their basic knowledge of subjects needed in Master';s studies.

Study materials

EN: Course materials in Moodle.

BH50A0240 Introduction to Power Plant Engineering

BH50A0240 Introduction to Power Plant Engineering

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	4 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Energy Technology 100%
Responsible persons	Minna Loikkanen, Administrative person Jussi Saari, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Prerequisites

EN: Basic knowledge on thermodynamics: state of matter, state diagrams, mass and energy balances, concepts of enthalpy and entropy.

Learning outcomes

EN: The student can:
1. explain the basic processes of thermal power plants, their depiction in T,s charts, and what factors affect the efficiencies.

2. apply mass and energy balances in the calculation of various plants and their components.

3. calculate and depict the compression, expansion and heat transfer processes of power plant components.

3. calculate the costs of power and heat generation.

Content

EN: Ideal comparison processes of power plant cycles.
Thermal power plants and power plant processes.

Calculation of power plant processes, and costs.

Steam power plants (condensing and cogeneration), gas turbines, combined cycles.

Additional information

EN: Contact teaching, on Lappeenranta campus. Teaching is not recorded or streamed.
SDGs: 7 affordable and clean energy; 13 climate action

NOTE: This 4 ECTS course in meant only for minor studies, such as Energy Technology or Energy Economics.

Study materials

EN: Lecture, exercise and example materials uploaded to Moodle.
Water h,s diagram.

BH60A5901 Climate Solutions

BH60A5901 Climate Solutions

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	5 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Environmental Technology 100%
Responsible persons	Michael Child, Responsible teacher Annukka Ilves, Administrative person Sanni Väisänen, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: The content and learning outcomes of the Climate Change course are based on:
- classifying climate change as a scientific phenomenon,
- explaining how it can be prevented (mitigation),
- summarizing how adaptation to it is possible.
In addition to discussing the scientific basis, the objectives of the course also include discussing the theme of climate change by:
- analyzing it as a global human challenge
- interpreting it as an ethical challenge to our understanding of human life
- commenting on it as a challenge related to the students' fields of study
- appraising it as a challenge regarding the students' personal roles as influencers

Content

EN: Introduction to Climate change: climate system, future of the climate, impacts, mitigation and adaptation, big issues, applied perspectives and assignments.

Additional information

EN: NOTE! BH60A7400 Climate.Now and BH60A5900 Climate Changeare alternative, both cannot be included in the degree!
***

Blended learning. Mandatory contact sessions once/month. Mandatory weekly group meetings.

***

The course is related to the UN's Sustainable Development Goals (SDG):

1 no poverty

2 zero hunger

3 good health and well-being

4 quality education

5 gender equality

6 clean water and sanitation

7 affordable and clean energy

8 decent work and economic growth

9 industry, innovation and infrastructure

10 reduced inequalities

11 sustainable cities and communities

12 responsible consumption and production

13 climate action

BH60A7200 Circular.now

BH60A7200 Circular.now

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English, Finnish
Grading scale	Pass-Fail
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Environmental Technology 100%
Responsible persons	Sanni Väisänen, Responsible teacher Annukka Ilves, Administrative person
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: After successfully completing the course, students are able to:
1. explain the targets of circular economy and understand possibilities to implement circular economy in different sectors,
2. understands capability of the selected products, production systems and services to fulfil the requirements of circular economy

Content

EN: Introduction to circular economy: circular economy aspects related to food systems, forest systems, product design, transportation sector and sharing economy.

Additional information

EN: ***The course is related to UN's Sustainable Development Goals (SDG):
7 affortable and clean energy, 9 industry, innovation and infrastructure, 11 sustainable cities and communities, 12 responsible consumption and production, 13 climate action.

NOTE! BH60A7200 Circular.Now and BH60A5401 Introduction to Circular Economy are alternative, both cannot be included in the degree!

Submitted tasks will be evaluated at the end of each period.

Company collaboration: The course utilizes video material recorded in collaboration with companies, showcasing real circular economy solutions across various industries.

Artificial intelligence: all kind of AI tools, including excess use of translation tools, is forbidden and will lead to failing the course.

BH60A0002 Basic Course in Environmental Technology A

BH60A0002 Ympäristötekniikan perusteet A

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English, Finnish
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Environmental Technology 100%
Responsible persons	Mika Horttanainen, Responsible teacher Annukka Ilves, Administrative person Ursula Salakka, Responsible teacher Mari Hupponen, Responsible teacher Amirsohrab Falsafi, Responsible teacher Oskari Sievinen, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: Upon completion of the course the student is expected to be able to
1. list the most important sustainability challenges posed by production and communities,
2. name the most typical ways of controlling sustainability challenges,
3. use environmental engineering terminology,

4. write a seminar report, act as an opponent, and give a poster presentation at the seminar,
5. apply system analytical and life cycle thinking, and
6. explain how other technology fields are connected to environmental engineering.

Content

EN: Sustainability challenges at different spatial scales, related e.g. to production, consumption, solid waste, water use, air quality, energy transition, food systems, household consumption and the built environment. Technical solutions and steering mechanisms for the management of the sustainability challenges. The course also introduces life cycle thinking.
Use of AI applications

AI applications are not used in this course.

Additional information

BH60A6801 Sustainable.now

BH60A6801 Sustainable.now

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3-5 cr
Languages	English, Finnish
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Environmental Technology 100%
Responsible persons	Annukka Ilves, Administrative person Miika Marttila, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: After successfully completing the course, students:
1) Understand the intersectional, partly contradictory, goals and interdimensionality of the climate challenge and the challenges of sustainable development.

2) Are familiar with the multidisciplinary links between climate change and different goals of sustainable development, and will identify different tools for solving problems.

3) Outline the importance of positivity and solution orientation both through the global responsibility of individuals and through the transformation of existing structures.

Content

EN: Sustainable.now is a basic course for anyone interested in sustainable development and climate change. The principles of sustainable development will be linked to the 1.5 degree climate target.
- Ecological sustainability

- Social sustainability

- Economic sustainability

- Cultural sustainability

The course provides a solid knowledge package on the concept of sustainable development and its ecological, social, economic and cultural dimensions, as well as the connections and tensions between them. The ethical perspective that runs through the course provides a basis for considering sustainable development also as a political and normative concept. The course also emphasizes the importance of agency and the different roles of the individual. Students will be given the opportunity to look at the sustainability of their own lifestyle in terms of individual choices, but on the other hand, sustainability and climate challenges will also be presented as a structural and systemic problem.

Additional information

EN: The course is a part of Climate University – a multidisciplinary digital learning platform in sustainability challenges. The flexible study paths to the working life is a collaboration project of eleven Finnish universities.
The student can choose either 3 or 5 credits option upon the need.

The course is related to UN's Sustainable Development Goals (SDG):

1 no poverty

2 zero hunger

3 good health and well-being

4 quality education

5 gender equality

6 clean water and sanitation

7 affortable and clean energy

8 decent work and economic growth

9 industry, innovation and infrastucture

10 recuded inequalities

11 sustainable cities and communities

12 responsible consumption and production

13 climate action

14 life below water

15 life and land

16 peace, justice and strong institutions

17 partnership for the goals

BH60A6000 Basic Course in Life Cycle Assessment

BH60A6000 Basic Course in Life Cycle Assessment

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	4 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Environmental Technology 100%
Responsible persons	Annukka Ilves, Administrative person Sanni Väisänen, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: After successfully completing the course, students will be able to:

- Describe the potential application areas of Life Cycle Assessment (LCA).
- Complete a simple LCA study using specific methodological steps.
- Understand the guidelines of ISO standards.
- Use the specialized LCA software, LCA For Expert (GaBi), at a basic level.
- Explain the importance of assumptions in interpreting LCA results, using examples.

Content

EN: Application areas of LCA, use of ISO standards: goal and scope setting, inventory analysis, impact analysis, result interpretation. One guided exercise for software. LCA documentation. The course is related to sustainability.

Additional information

CS30A1365 Sustainability-oriented innovation

CS30A1365 Sustainability-oriented innovation

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Industrial Engineering and Management 100%
Responsible persons	Nina Tura, Responsible teacher Armi Rissanen, Administrative person
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Prerequisites

EN: Students should have accomplished: Innovaatio- ja teknologiajohtamisen peruskurssi (Basics in innovation and technology management) or equivalent.

Recommended prerequisites

CS30A0952 Innovation and Technology Management: a Basic Course

Learning outcomes

EN: The course aims to familiarize students with the concept of sustainability-oriented innovation and its applications to innovation management.
Aims:
After completion of the course, students will be able to:
1) Understand and explain the key concepts and theoretical principles related to sustainability and innovation.
2) To be able to examine the different types of sustainability-oriented innovations and companies executing such innovations.
3) Recognize and understand the characteristics of new emerging concepts, markets and business models (such as circular economy) having potential for sustainable value creation.
4) Critically examine sustainable value creation including possibilities for negative value creation (e.g. tensions and trade-offs)
5) To be able to critically analyze organizations' development and management requirements related to sustainability-oriented innovation.
6) To understand an apply practically learned principles and concepts in relation to innovation management practices and innovation processes.

Content

EN: The idea of the course is to learn and understand the links between innovation management and sustainability and familiarize students with the emerging concepts of sustainability-oriented innovation. The course aims to enhance the development of students' sustainability competences (e.g. critical and anticipatory thinking, collaboration, communication, strategic action and systems thinking) to be used in future decision-making.

Additional information

EN: Course utilizes Moodle-platform.
***
The course is related to UN's Sustainable Development Goals (SDG): 8 decent work and economic growth, 9 industry, innovation and infrastructure, sustainable cities and communities, 12 responsible consumption and production, 13 climate action, 17 partnership for the goals

Recommended prerequisites

LES10A210 Engineering Mathematics II

CT60A0250 Fundamentals of Programming for international programs

Learning outcomes

EN: After the course, the student is an elementary-level user of some computational development environment and is familiar with finding its documentation and implementing numerical methods using the development environment. The student has been introduced to software engineering and can define and solve simple computational problems using the development environment or a spreadsheet program. The students can use and produce technical information and assess information produced by themselves and others. The student may be introduced to use of AI tools in problem-solving and writing assistance.

Content

EN: The course introduces the student to basics of Matlab: Interface of the integrated development environment (IDE), conditional structures, array structures, plotting curves and surfaces, loop structures. In addition, Simulink and a spreadsheet program is used for problem-solving. Basic applications in numerical analysis, such as root finding, optimization and solving simple differential equations, with examples for engineering. Documenting the development process and writing formulas using LaTeX.

Company cooperation

The course project may be done for a company.

Use of AI tools

AI tools can be used to assist in problem-solving and writing. As an optional topic, you may train your own AI to solve a simple problem.

Additional information

EN: The course is related to UN's Sustainable Development Goals (SDG): 4 quality education, 5 gender equality and 10 reduced inequalities

Study materials

EN: The course material is disseminated on Moodle. Optionally, the Matlab Academy courses "Matlab Onramp" and "Matlab Fundamentals" may be used to supplant the material.

Course Completion		4 cr

LES10A410 Engineering Project Work

LES10A410 Engineering Project Work

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	5-10 cr
Languages	English, Finnish
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LUT School of Energy Systems 100%
Responsible persons	Michael Child, Responsible teacher Alex Rosu, Responsible teacher Annukka Ilves, Administrative person
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Compulsory prerequisites

BK10A6101 Technical Documentation and 3D Modeling

BK10A6300 Engineering Design

Learning outcomes

EN: After successfully completing the mandatory part of the course , students are able to:

- apply knowledge gained from earlier course work to practice
- improving time management, critical thinking and problem-solving skills
- collaborate effectively and systematically in a multicultural environment
- develop creative ideas and solutions to real-world problems
- planning and implementing a product development project as part of development team based on a written project plan.
- design and implement a product or service
- incorporate end-user or customer needs into product/service design
- give and receive feedback on the effectiveness of project activities
- making a connection between innovation, design, and production with the sustainable development goals (SDGs)

Additionally, depending on amount of optional credits:

- use tools and other resources to develop a prototype
- testing a prototype to come up with further development suggestions and to optimize the design of final product
- presenting a built prototype to a real audience of peers and invited corporate sponsors during the spring's JHC seminar at Lappeenranta campus or other event
- prepare supplementary plan for further development of the prototype while also reporting the main results related to the prototype development/testing

Content

EN: The course enhances experience in challenge based learning through a learning-by-doing approach. Students will be engaged in solving a specific real-world problem or answering a complex question related to one of the core areas of expertise (Electrical engineering, Energy technology, Mechanical engineering, Environmental Technology etc.). In the end, students will demonstrate new knowledge and skills by developing a useful product or service in cooperation with possible corporate sponsors and presenting it to a real audience.
Students will receive extended instruction on the nature of challenge based learning, and then apply this knowledge to the project work. First steps will involve defining the question, problem or challenge that will serve as the basis of the project work. This will be followed by the design of a prototype product or service (and based on achievable additional credits, the construction phase of the prototype will also be involved). Throughout the project work, students will give, receive and use feedback to further improve their process and prototypes. Possible corporate sponsors may also provide feedback throughout the project. After refinement, the designed product/service and possible prototype will be explained, displayed, and presented to peers and possible corporate sponsors.

Additional information

EN: Blended learning
***

Students can participate in their group's project work on both campuses (Lappeenranta/Lahti)

***

It is possible to achieve a total of 10 credits in the course:

- mandatory 5 ECTS are gained during periods 1-2
- additional/optional 5 ECTS can be gained during periods 3-4

***

The course is related to the UN's Sustainable Development Goals (SDG), depending on the project chosen:

1) no poverty

2) zero hunger

3) good health and well-being

4) quality education

5) gender equality

6) clean water and sanitation

7) affordable and clean energy

8) decent work and economic growth

9) industry, innovation and infrastructure

10) reduced inequalities

11) sustainable cities and communities

12) responsible consumption and production

13) climate action

14) life below water

15) life and land

16) peace, justice and strong institutions

17) partnership for the goals

BK10A6300 Engineering Design

BK10A6300 Engineering Design

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LES, Mechanical Engineering 100%
Responsible persons	Annukka Ilves, Administrative person Changyang Li, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Prerequisites

EN: BK10A5800 Engineering Mechanics 1 (or equivalent);
BK10A6000 Engineering Mechanics 2 (or equivalent);

BK10A6101 Technical Documentation and 3D Modeling (or equivalent).

Equivalences to other studies

BK65A0203 Engineering Design

Learning outcomes

EN: After successfully completing the course, students are able to:

- work in a constructive and systematic way as part of a product development;
- apply creative ideation in the product development process;
- compare and apply the methodologies of product planning;
- select the suitable and necessary machine elements for the product;
- explain the interactions of basic machine elements.

Content

EN: The content of the course includes:

- Fundamentals of a systematic product planning and systematic machine design process, including idea generation, conceptual design, embodiment design, details design, manufacturing, etc;
- Knowledge of different machine elements, including gears, bearing, key, shaft, coupling, fasteners, etc.
- Knowledge about reverse engineering, design for manufacturing and assembly, etc...

Additional information

EN: Blended learning
The course is not suitable for the 1st year LUT students. The 1st year LUT students will be removed by teacher in the first week. If there is question about your qualification of attending the course, please send email to the teacher.

Artificial intelligent tool is allowed to be used in this course to collect information, it is forbidden for writing purpose.

The course is related to UN's Sustainable Development Goals (SDG): 9 industry, innovation and infrastructure

Study materials

EN: The study materials include:

- Lecture materials;
- Michael B. Spektor, 2018, Machine Design Elements and Assemblies.

CT60A4304 Basics of database systems

CT60A4304 Basics of database systems

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Software Engineering 100%
Responsible persons	Jonna Naukkarinen, Administrative person Jiri Musto, Responsible teacher Iflaah Salman, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Information and Communication Technologies (ICTs)

Prerequisites

EN: Introduction to Programming or equivalent.

Recommended prerequisites

CT60A0203 Fundamentals of Programming

or

CT60A0250 Fundamentals of Programming for international programs

Equivalences to other studies

CT60A4350 Basics of Database Systems (Lahti)

Learning outcomes

EN: At the end of the course the student will be able to:
1.Design and model relational databases

2.Understand how the evolution of relational algebra led to SQL databases

3.Model real world problems with ER and transform the ER model to relational databases

4.Understand and solve issues related to relational database design, such as optimization and normalization

5.Implement relational databases in practice and embed them in applications

Content

EN: Database systems. Database design. Object-centric modeling and ER-modeling. Specifying relational models. SQL and object languages.
Perspectives into database design: How database is designed, how data is modeled, and what are data storage structures and access methods.

Transforming ER models to relational models, and then to relational databases. Basics to database programming: queries and other operations, database management, such as triggers. Implementing databases in practice and how to use SQL databases from other programs.

Additional information

Prerequisites

EN: Basics of database systemsObject-oriented programming

Compulsory prerequisites

CT60A4304 Basics of database systems

Equivalences to other studies

CT60A7660 Database Systems Management (Lahti)

Learning outcomes

EN: At the end of the course students will be able to

1. Create a relational model and a relational database
2. Understand relational algebra and relational calculus
3. Design a database application, data distribution, and architectures for data storage, retrieval, and administration of a database management system
4. Apply scalability, performance, security, and authorization
5. Demonstrate the knowledge of concepts and principles underlying the functioning of database management systems and maintenance.

Content

EN: Relational model and relational database design. Database applications, data distribution and architectures. Data storage and retrieval, data scalability, performance, security, authorization. Modeling and programing for semi-structured data, secondary storage management.

CT60A5532 Software Project Management

CT60A5532 Software Project Management

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Software Engineering 100%
Responsible persons	Jonna Naukkarinen, Administrative person Micheal Tuape, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Information and Communication Technologies (ICTs)

Prerequisites

EN: CT60A4002 Ohjelmistotuotanto (Software Engineering).

Equivalences to other studies

LM10A1000 Project Management

or

CT60A5550 Software Project Management (Lahti)

Learning outcomes

EN: At the end of the course students will be able to

1. Demonstrate knowledge of key Project Management concepts and terminology
2. Develop a project plan for the development of a commonly used software
3. Demonstrate knowledge of tools and techniques for monitoring quality control of IT projects
4. Understand the importance of defining and anticipating potential risks
5. Describe how to communicate project progress to all stakeholders
6. Explain the roles and duties and responsibilities of software project managers
7. Explain how to manage and staff software project teams
8. Describe how to manage stakeholder expectations
9. Identify issues that could lead to software project success or failure

Content

EN: The Software Project Management course introduces the fundamentals of project management, beginning with project definition through the post-project review. There will be an emphasis placed on applying project management concepts and techniques to software development projects. The following topics will be covered in the course:

1. Introduction to Software Project Management
2. Project Methodologies and Processes
3. Measurable Organizational Value and the Business Case
4. Project Managers, Teams, and Stakeholders
5. Project Scope, Structure, and Scheduling
6. Project Infrastructure, Resources, and Costs
7. Managing Project Quality

8. Managing Project Risks
9. Project Execution, Completion, and Control

Additional information

EN: 3 ECTS cr course implementation for the students in Lahti campus, 6 ECTS cr course implementation for the students in Lappeenranta campus. Note mode of study is blended learning, not full-digi (changed 16.8.2022).

CT10A7052 Software Engineering work practise

CT10A7052 Software Engineering work practise

Curriculum period	2025-2026
Validity period	since 1 Aug 2025

Credits	3 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Software Engineering 100%
Responsible persons	Jonna Naukkarinen, Administrative person Ari Happonen, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Information and Communication Technologies (ICTs)

Prerequisites

EN: It is highly recommended, that the participating student has already collected around 90 ECTS or more study points, before participating into this course.

Learning outcomes

EN: Students will learn about current trends and realities related to the software engineering jobs, work activities young recruits typically become in contact in first few years and how digitalization and digital transformation of worklife might change academic and private organization near future careers and expectations put on students skills, when selected onf first study area related jobs.
Course assignments are designed to give a glimpse into the current work-life skill set expectations, connected to the yearly changing context, based on lectures given by industry and university visiting lecturers. The course e.g. connects work life RDI activities on software level and how that affects our everyday life and how students should prepare to future work-life.

After completing the course student will be able to:
1. utilize the course knowledge into real life cases
2. explain more clear sense on future work-life skill set expectations including lifelong learning
3. evaluate own believes of work-life expectations into presented ones
4. apply orally given experts know-how into another use case context
5. evaluate different software engineering career paths compared to own skill set, knowledge base and motivation areas

Content

EN: The course is based on a series of visiting lectures given by the researchers / professors from LUT and lectures given by yearly changing industry and public sector experts and company representatives. The lectures introduce students to research, industry work practices / expectations towards students knowledge base on work practices e.g. when applying and working in junior positions. Most lectures are connected to course tasks related to the lecture context (e.g. research / skill building task on industry area of the visiting lecturer or reflecting a topic specific research article, small ICT jobs related problem solving task etc.). All tasks are evaluated, and tasks can also include follow up discussions in the lectures. Some lectures may include e.g. live demonstrations of tools used in industry, like data-analysis, software testing/development and UI modeling tools. Within the lectures, students shall learn details from software engineering positions related daily work practices, receive software engineering career path building guideline points and have access to ask direct questions from the visiting lecturers. Visiting lectures may explain the insight on how to achieve a specific career goals (e.g. project/product manager positions) or practical view from school to funder of your own startup and working as ICT field CEO.

Additional information

EN: Note! Course replaces CT10A7051 Area Expert's Views on Future Work-life Expectations and can not be included in the same degree.
The tasks evaluated in the course are connected to the lectures given by the teacher in charge and the visiting lecture(s). Students should take this into account as previous years tasks are considered case by case, will the be accepted in follow up teaching years.

The course is related to UN's Sustainable Development Goals (SDG): 4 quality education, 5 gender equality, 8 decent work and economic growth, 9 industry, innovation and infrastructure, 10 reduced inequalities, 17 partnership for the goals

Study materials

EN: Self study on Jalali S., Wohlin C., Systematic Literature Studies: Database Searches vs. Backward Snowballing.
Other material shall be given and presented in the course lectures. In addition, some needed support material for course tasks can be given within the release of the tasks.

Prerequisites

EN: Basics of Linux (or equivalent knowledge),CT60A0203 Introduction to Programming

Recommended prerequisites

CT30A3232 Basics of Linux

CT60A0203 Fundamentals of Programming

Learning outcomes

EN: At the end of the course the student will be able to:
1. Design and implement repositories for software engineering projects

2. Understand how the evolution of development practices led to DVCS and DevOps

3. Understand and solve issues related to versioning and deployment

4. Set up continuous deployment pipeline

5. Implement testing and other deployment processes as a part of a DevOps process

Content

EN: Distributed version control systems (DVCS). Modern repository hosting platforms, such as GitHub and GitLab. Repository best practices, management, and administration. Solving repository errors. Continuous deployment processes and executing tests. Basics of container platforms, such as Docker. Deploying basic applications from source control systems.

Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: The aim is that after completing the course, the student recognizes the importance of entrepreneurship from a business perspective, as well as the social dimensions of entrepreneurship and small business, and is able to distinguish between the concepts of entrepreneur and entrepreneurship. In addition, after completing the course student is familiar with the characteristics of small business and the process of business formation.

Content

EN: The course familiarize students with the concepts of entrepreneurship and small business. The aim of the course is to enhance of students' understanding in the importance of entrepreneurship and small business for economies.

Additional information

EN: Online course. For the students of BSc in IEM.

Study materials

EN: Course book and materials distributed in Moodle.

Completion method and assessment items	Recurrence	Credits
Method 1	Recurrence 1: 3. period-4. period	6 cr

Method 2	Recurrence 1: 3. period-4. period	6 cr
Course Completion		6 cr

CS39A0060 B2B Marketing in industrial context

CS39A0060 B2B Marketing in industrial context

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Industrial Engineering and Management 100%
Responsible persons	Armi Rissanen, Administrative person Jussi Heikkilä, Responsible teacher Tero Rantala, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: Upon the successful completion of this course, students should be able to

- Describe the key characteristics and marketing approaches in B2B and B2C (Business-to-Consumer) contexts.
- Demonstrate understanding of the concepts and applications of business marketing.
- Apply the marketing mix tools and critically assess strategic marketing choices and positionings of industrial companies.
- Apply the theoretical knowledge to understand and analyze the ongoing digital transformation challenges and green transformation in the industrial B2B marketing context.

Content

EN: The lectures cover a range of topics concerning business marketing, including organizational buying behavior; market research; segmentation, targeting and positioning; strategic planning of marketing; market entry tactics and pricing; product strategy and product development; digitalization and services for business markets; managing business marketing channels; business to business marketing communications; future of business marketing.
The course integrates theory and practice to foster active involvement and self-reflection and aid students in preparing for professional practice.

Additional information

EN: The course is related to UN's Sustainable Development Goals (SDG): 9 industry, innovation and infrastructure, 12 responsible consumption and production

If a student of Industrial Engineering and Management has already completed *A130A0010 Markkinoinnin perusteet (6 cr)* this is a compensatory course for *CS39A0060 B2B Marketing in industrial context (6 cr).* It's not allowed to include both of those courses to student's personal study plan (PSP).

Study materials

EN: Will be announced on the Moodle pages of the course.

Completion method and assessment items	Recurrence	Credits

CS39A0040 Product and Service Development

CS39A0040 Product and Service Development

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Industrial Engineering and Management 100%
Responsible persons	Ilkka Donoghue, Responsible teacher Armi Rissanen, Administrative person Mira Timperi, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Prerequisites

EN: Not required

Learning outcomes

EN: The student can apply the following concepts:
- Product and service development processes and methodologies (waterfall, agile)

- understand the product, service, solution development frameworks

- Product & Service Configuration Management & Change Management

- System Engineering basics

- Product and service definition views (Technical, business, delivery, marketing, legal, QEHS)

- Development IT solutions used in extended the organisations

- Understand the product & service development role in the Product Lifecycle Management contexts.

Content

EN: Product-Service Systems types in B2B and C2B
Product and service development processes and tools

Product and service development and role place in PLM

Product and service definition and it different view points

Different types of approaches to product/service development (e.g. SysEng)

Additional information

EN: This course is aimed for the students of Bachelor's Degree level.

Study materials

EN: Lecture materials, articles and parts of relevant books

CS39A0090 Networks and ecosystems

CS39A0090 Networks and ecosystems

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Industrial Engineering and Management 100%
Responsible persons	Satu Rinkinen, Responsible teacher Armi Rissanen, Administrative person
Study level	Intermediate studies

Study field	Fields of education (Ministry of Education and Culture), Engineering, manufacturing and construction

Learning outcomes

EN: After completing the course the student understands the role of social and inter-firm networks in business and innovation activities. After the course the student is able to analyze and describe an organization's role in ecosystems, and to utilize the ecosystem-based view when planning and developing business and innovation activities.

Content

EN: The core content of the course includes:
- Networks as social and economic organization

- Network-based view on business and innovation

- Business and innovation ecosystem characteristics

- Ecosystems as affiliation and as a structure

- Ecosystem evolution

Additional information

EN: The course is related to UN's Sustainable Development Goals (SDG): 9 industry, innovation and infrastructure

Study materials

EN: Lecture slides, and articles and videos informed and provided on the course's Moodle page.

CT60A4350 Basics of Database Systems (Lahti)

CT60A4350 Basics of Database Systems (Lahti)

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Software Engineering 100%
Responsible persons	Jonna Naukkarinen, Administrative person Iflaah Salman, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Information and Communication Technologies (ICTs)

Prerequisites

EN: Introduction to Programming or equivalent.

Compulsory prerequisites

CT60A0203 Fundamentals of Programming

or

CT60A0250 Fundamentals of Programming for international programs

Equivalences to other studies

CT60A4304 Basics of database systems

Learning outcomes

EN: At the end of the course the student will be able to:
1. Design and model relational databases

2. Understand how the evolution of relational algebra led to SQL databases

3. Model real world problems with ER and transform the ER models to relational databases

4. Understand and solve issues related to relational database design, such as optimization and normalization

5. Implement relational databases in practice and embed them in applications

Content

EN: Database systems. Database design. Object-centric modeling and ER-modeling. Specifying relational models. SQL and object languages.
Perspectives into database design: How database is designed, how data is modeled, and what are data storage structures and access methods.

Transforming ER models to relational models, and then to relational databases. Basics to database programming: queries and other operations, database management, such as triggers. Implementing databases in practice and how to use SQL databases from other programs.

Additional information

EN: The course is related to UN's Sustainable Development Goals (SDG):
9 industry, innovation and infrastructure

Study materials

EN: Beynon-Davies, P.: Database Systems, Palgrave Macmillan, Third Edition, 2004. Foster, Elvis, C.: Database Systems A Pragmatic Approach, Apress, 2014. Lecture notes and other material assigned at the course. Coronel, C., & Morris, S. (2019). Database Systems: Design, Implementation and Management (13th ed.). Cengage Learning.

CT60A5522 Cyber Security of Software Systems

CT60A5522 Cyber Security of Software Systems

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Software Engineering 100%
Responsible persons	Jonna Naukkarinen, Administrative person Syed Naqvi, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Information and Communication Technologies (ICTs)

Prerequisites

EN: CT60A0202 Introduction to Programming, CT60A4002 Software Engineering or equivalent knowledge, CT60A5540 - Computer networks and Internet

Compulsory prerequisites

CT60A0203 Fundamentals of Programming

CT60A4002 Software Engineering

CT60A5540 Computer networks and Internet

Learning outcomes

EN: The objective of the course is to introduce the fundamental aspects of the cyber security and cyber security thinking to the student, especially from the viewpoint of software engineering and the entire software organization. After the course, the student identifies and understands how the cyber security is related to the software development, what are the most common security threats from the viewpoint of software, and how they are usually managed.

Content

EN: Fundamental concepts of cyber security. Threats and vulnerabilities. The common attack and prevention techniques. The fundamentals aspects and objectives of cyber security-related activities. The effect of security policies. Cyber security from the viewpoint of software engineering.

Additional information

EN: Note

The course includes programming exercises which require good programming skills. The course requires knowledge of network traffic, understanding of how the web protocol works, and knowledge of databases (recommended for additional prerequisites: Computer networks and Internet (or equivalent knowledge) and Web technologies (or equivalent knowledge).

For the Software and Systems Engineering (Lahti) programme 3 ECTS cr is offered in 3-4 period and graded on 1-5 scale.

The course is related to UN's Sustainable Development Goals (SDG): 9 industry, innovation and infrastructure, 12 responsible consumption and production, 16 peace, justice and strong institutions

Study materials

EN: Corporate Computer and Network Security (2nd Edition) by Raymond R. Panko
Other materials provided by the lectures.

CT60A5511 Software Quality Management

CT60A5511 Software Quality Management

Abbreviation: CT00CT38

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Software Engineering 100%
Responsible persons	Jonna Naukkarinen, Administrative person Azeem Akbar, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Information and Communication Technologies (ICTs)

Prerequisites

EN: CT60A4160 Ohjelmistotestauksen periaatteet, CT60A0202 Ohjelmoinnin ja data-analytiikan perusteet

Learning outcomes

EN: By completing the course the student knows the most common quality assurance (QA) models, measurements and tools applied in the software processes. The student has the capability of doing QA tasks independently, or design and implement quality control tools to measure quality as a part of larger process organization. Student knows how quality assurance is done and how the QA and software development are associated.

Content

EN: Software quality-related models and measurements. Software quality and quality control-related tools and the common documents. Software quality assurance as an organizational activity, improvement of software quality. Quality-related standards and certifications, Quality assurance and quality control in practice.

Additional information

EN: Continuous enrollment. The course deliverables have to be submitted for grading within 50 days from starting the course.

Study materials

EN: Galin, Daniel. Software quality assurance: from theory to implementation. Pearson Education India, 2004. Kasurinen, Jussi Pekka. Ohjelmistotestauksen käsikirja. Jyväskylä: Docendo, 2013.Other material provided by the course website.

CT60A5550 Software Project Management (Lahti)

CT60A5550 Software Project Management (Lahti)

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	3 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Software Engineering 100%
Responsible persons	Jonna Naukkarinen, Administrative person Micheal Tuape, Responsible teacher
Study level	Basic studies
Study field	Fields of education (Ministry of Education and Culture), Information and Communication Technologies (ICTs)

Prerequisites

EN: CT60A4002 Ohjelmistotuotanto (Software Engineering).

Equivalences to other studies

CT60A5531 Software Project Management

Learning outcomes

EN: At the end of the course students will be able to

1. Demonstrate knowledge of key Project Management concepts and terminology
2. Develop a project plan for the development of a commonly used software
3. Demonstrate knowledge of tools and techniques for monitoring quality control of IT projects
4. Understand the importance of defining and anticipating potential risks
5. Describe how to communicate project progress to all stakeholders
6. Explain the roles and duties and responsibilities of software project managers
7. Explain how to manage and staff software project teams
8. Describe how to manage stakeholder expectations
9. Identify issues that could lead to software project success or failure

Content

EN: The Software Project Management course introduces the fundamentals of project management, beginning with project definition through the post-project review. There will be an emphasis placed on applying project management concepts and techniques to software development projects. The following topics will be covered in the course:

1. Introduction to Software Project Management
2. Project Methodologies and Processes
3. Measurable Organizational Value and the Business Case
4. Project Managers, Teams, and Stakeholders
5. Project Scope, Structure, and Scheduling
6. Project Infrastructure, Resources, and Costs
7. Managing Project Quality
8. Managing Project Risks
9. Project Execution, Completion, and Control

Additional information

EN: Note mode of study is blended learning

Study materials

EN: To be announced in Moodle

EN: Basic course on object-oriented programming with Java

Prerequisites

EN: CT60A4002 Software Engineering (or equivalent), CT60A0201 Introduction to Programming (or equivalent)

Compulsory prerequisites

CT60A0203 Fundamentals of Programming

CT60A4002 Software Engineering

Equivalences to other studies

CT60A2412 Object-Oriented Programming

Learning outcomes

EN: At the end of the course students will be able to:
1. Solve typical programming problems with object-oriented programming methods
2. Use Java and its features in programming
3. Read and describe Java code and UML diagrams
4. Utilize version control
5. Design basic graphical user interface.

Content

EN: Object-orientation, classes, inheritance, basics of modelling classes, principles of Java, basic data structures, abstract data types, exceptions, graphical user-interface.

Additional information

EN: ***The course is related to UN's Sustainable Development Goals (SDG):9 industry, innovation and infrastructure, 10 reduced inequalities

Study materials

EN: Lecture slides and videos.
Eckel B (2006) Thinking in Java, 4th ed. Prentice Hall, Upper Saddle River, NJ, Thinking in Java.

Other material announced in the lectures.

CT30A3350 Operating Systems and System Programming (Lahti)

CT30A3350 Operating Systems and System Programming (Lahti)

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5

University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Software Engineering 100%
Responsible persons	Jonna Naukkarinen, Administrative person Saddam Mukta, Responsible teacher
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Information and Communication Technologies (ICTs)

Prerequisites

EN: CT60A0200 Introduction to Programming (Ohjelmoinnin perusteet), CT60A0210 Practical Programming (Käytännön ohjelmointi), BM40A0300 Data Structures and Algorithms (Tietorakenteet ja algoritmit) or CT60A0210 Principles of C-Programming (C-ohjelmoinnin perusteet), or equivalent C-programming course.

Equivalences to other studies

CT30A3370 Operating Systems and System Programming

Learning outcomes

EN: After successful completion of the course, the student:
1. Understands how an operation system is built and how it works with application programs,
2. Can divide complex problems into smaller sub-problems,
3. Knows how a large programming project the size of an operation system is planned and executed,
4. Has acquired an overview of the structure of a computer system and the connections to algorithmics, computer architecture, operation systems, compiler programs and interpreters and to software production,
5. Understands the importance of systems programming in application development and in system maintenance,
6. Knows the basics of the operation system,
7. Can write Posix programmes using the C language
8. Can apply Posix libraries and system level functions in his/her programmes,
9. Can write Unix scripts.

Content

EN: Basic structures and functions of the operating system: file system, processes, memory management. Structure of the Unix system. C programming language and its programming environment and tools in the Unix system. Unix command decoder programming. Standard I/O-library, advanced I/O functions. System data and files. Processes, process management, interprocess relations. Braid ends and their management. Service processes. Interprocess communication. Signals and their management.

Additional information

EN: The course exam is taken at the Moodle, and there is no separate registration for the exam.
The English version of the course is offered at Lahti campus, the Finnish Anytime-course at Lappeenranta.

The course is related to UN's Sustainable Development goals (SDG): 8 decent work and economic growth, 9 industry, innovation and infrastructure.

CT60A2700 Software development with the C-programming language for international programs

CT60A2700 Software development with the C-programming language for international programs

Curriculum period	2025-2026
Validity period	since 1 Aug 2025
Credits	6 cr
Languages	English
Grading scale	General scale, 0-5
University	Lappeenranta-Lahti University of Technology LUT
Responsible organisation	LENS, Software Engineering 100%
Responsible persons	Jouni Järvinen, Responsible teacher Jonna Naukkarinen, Administrative person
Study level	Intermediate studies
Study field	Fields of education (Ministry of Education and Culture), Information and Communication Technologies (ICTs)

Prerequisites

EN: Compulsory prerequisites

- CT60A0250 Fundamentals of Programming for international programs
- CT60A2411 Object-oriented programming

Recommended prerequisites

- CT30A3232 Basics of Linux
- CT60A4160 Fundamentals of Software Testing

Learning outcomes

EN: This comprehensive course introduces learners to the fundamentals of software development using the C programming language. Through a structured hands-on approach, students will gain a solid understanding of software development in C, covering topics such as data representation, memory management, control flow, functions, and data structures.
In the second period, students will undertake a larger programming project independently, applying the skills learned throughout the course. The course concludes with an exam where students will be required to program tasks independently in an EXAM hall.

Content

EN: Week 1: Data and the memory

- Bits, bytes, characters and memory addresses
- Representing integers and floats
- Pointers
- Strings

Week 2: Handling data and I/O in C

- Outputting numbers

- Outputting text
- Inputting numbers
- Inputting text
- sizeof() operation

Week 3: Structure and Control Flow

- Structure of a C program
- Conditional statements: if, else, switch
- Loops: for, while, do-while
- Break and continue
- Operations for numbers and Booleans
- string.h header file

Week 4: Functions

- Declaring and defining functions
- Character arrays vs pointers to string literals
- Function parameters
- Type conversions

Week 5: Data structures and advanced memory management

- Arrays
- Multidimensional arrays
- Pointer arithmetic
- Understanding memory allocation: stack vs. heap
- Introduction to dynamic memory allocation

Week 6: Dynamic memory allocation

- malloc, calloc, realloc and free functions
- getline function
- Writing text files
- Reading text files
- Structs

Week 7: Structuring data

- Pointers to structures (slides | video)
- Linked lists (slides | video)
- Queues (slides | video)

Week 8: Development tools I

- Project work starts
- Memory leaks: using Valgrind
- Creating own header files

Week 9: Development tools II

- Project work continues
- Makefile

Week 10: Advanced pointer topics

- Project work continues
- Pointers to functions

Week 11: Exploring C header files

- Mathematical functions
- Time and date functions
- Character handling
- Some other Important headers:

Week 12: Working with binary data

- Binary files
- Bit operations

Week 13: Troubleshooting and documentation

- Debugging
- Man pages

Week 14: Exam

- Information about the exam

Study materials

EN: Lecture slides, code examples and videos available in Moodle.

EN: LITO course

Learning outcomes

EN: Upon successful completion of the course, the student will be able to:
· name the key concepts and theories in the areas of organisation, management and leadership

· name the key concepts and evaluate the functions of human resource management

· understand the major tools of strategic management

· understand business in the network of global interactions

· apply theory in practical leadership and management situations.

Content

EN:

- Management and leadership
- The development of leadership thinking and leadership theory
- The key concepts of management leading culture, innovation and change

- Organisations and organisational behaviour
- Organisational structure
- Organisational culture
- Organisational life
- Human resource management
- Human resource management
- Leading individuals, teams and groups
- Motivation and coaching
- Strategic thinking and strategic tools
- The development of strategic thinking and strategy
- Strategic tools
- Strategic management in a global environment

Additional information

EN: Note
Only for technology and social science students. The latest information about the course is updated and published on the course platform at www.lito.fi.

Please note that the completion of the course takes place on the DigiCampus learning platform. Login instructions to the platform will be provided to the students who have registered for the course via email.

Late enrollments are not accepted.

The LITO courses are organised in co-operation with multiple universities. To enable registering credits when the course is completed, it is necessary to transfer data about the student from their home university to the university that is responsible for organizing the course. The data to be transferred consists of: name, gender, nationality, e-mail address, personal identification number and the home university. Data that is classified as secret is not transferred. Without data transfer it is not possible to have the course credits registered.

The course will run from 2 February 2026 to 6 April 2026 (Weeks 6-15) + exam resits.

Study materials

EN: Robbins, Stephen P. – Judge, Timothy A. – Campbell, Timothy T. (2017) Organizational Behavior. OR
Robbins, Stephen P. – Judge, Timothy A. (2021) *Essentials of Organizational Behavior*. Global edition. Pearson.

The course instructors may ask students to read additional literature (e.g. articles). Details of additional readings are given at the beginning of the course.

EN: LITO course

Prerequisites

EN: The course includes a compulsory preliminary assignment that has to be completed successfully by a pre-defined date.

Learning outcomes

EN: Upon completion of the course, students will be able to:
· describe the role of marketing in an organisation and identify the significance of customer orientation in both the development of the organisation and personal actions

· apply the key concepts of marketing (e.g. customer-perceived value, the value creation process, the brand, the marketing mix and segmentation) in decision-making and evaluate decisions

· describe the diverse emphases of business-to-business marketing and consumer marketing, and the key characteristics of both logics

· identify and utilise key marketing communication channels in the fickle business environment

· understand sales processes in their entirety, the different parts of them in both consumer and business-to-business sales.

In addition to core marketing skills, the course develops working life skills, such as

· problem-solving and project management skills

· critical thinking / information assessment skills

· the analysis and application of information

· the utilisation digital platforms

· written and oral expression.

Content

EN: · Key marketing concepts, definitions and phenomena now and before

· Understanding these concepts in diverse contexts: The differences between consumer logic and business-to-business logic

· Customer-centred thinking and value creation

· Customer-oriented strategy in a changing business environment

· Key concepts and phenomena in consumer marketing

· Business-to-business marketing and organisational buying behaviour

· Marketing communication channels and content

· Sales processes in consumer and business-to-business contexts, as well as personal sales and interaction skills at different phases of sales processes

Additional information

EN: Only for students of technology and social sciences. The latest information about the course is updated and published on the course platform at www.lito.fi.
Please note that the completion of the course takes place on the DigiCampus learning platform. Login instructions to the platform will be provided via email to the students who have registered for the course.

The course will run from early March to early May 2026 (Weeks 10–19. There will be a pre-assignment in Week 9.

The LITO courses are organised in co-operation with multiple universities. To enable registering credits when the course is completed, it is necessary to transfer data about the student from their home university to the university that is responsible for organizing the course. The data to be transferred consists of: name, gender, nationality, e-mail address, personal identification number and the home university. Data that is classified as secret is not transferred. Without data transfer it is not possible to have the course credits registered.

Study materials

EN: The teachers will specify the literature at the beginning of the course.
The course material, literature and assignments are in English. However, students may submit their assignments either in Finnish or English.

EN: LITO-course

Prerequisites

EN: Preliminary assignment.

Learning outcomes

EN: Upon successful completion of the course, students will be able to:
· define basic economic concepts

· understand economic thinking and apply economic theory in the analysis of a business environment and market economies.

The course also develops problem-solving and analysing skills, and critical thinking, as well as developing the skills required to apply theoretical knowledge.

Content

EN: The course provides students with basic skills in analysing the business environment and provides an overview of its evolution from an economic perspective. Proactive identification of both opportunities in the business environment and threats to the business environment is increasingly important for successful businesses in the global economy.
During the course, the students will familiarise themselves with:

- the decision-making processes in companies and among consumers, and how the markets function (microeconomics)
- economic growth, business cycles, labour markets, inflation, monetary policy and economic policy (macroeconomics)
- the role of the public sector and the focal public policy instruments in market economies (public economics)
- international trade, financial markets, European integration and multinational companies (international economy).

Additional information

EN: Only for students of technology. The latest information about the course is updated and published on the course platform at www.lito.fi.
Late enrolments are not accepted.

Please note that the completion of the course takes place on the DigiCampus learning platform. Login instructions to the platform will be provided to the students who have registered for the course via email.

The course site opens in Week 9. The online course runs from 23 February to 5 April 2026 (Weeks 9–14). The exam can be taken between 13 April and 19 April 2026 (Week 16). Exam resits will be in Weeks 18 and 21.

Study materials

EN: The electronic coursebook is openly accessible in both English and in Finnish online:
The CORE Team: The Economy. Available at: http://www.core-econ.org.
CORE-työryhmä, Talous. Saatavilla sähköisesti: https://www.core-econ.org/project/core-talous/

The instructors may assign additional literature during the course.

EN: LITO course

Learning outcomes

EN: Upon completion of the course, the students will be able to:
· define and apply key concepts and perspectives regarding CSR

· identify relevant issues and analyse the challenges related to corporate responsibility in selected industries

· describe the role of CSR in business and in relation to wider international political and economic issues

· describe the different aspects through which organizational practices can be CSR-oriented

· apply key concepts of CSR in their daily work.

In addition, the students will be able to analyse CSR literature, organise their work independently and work in a virtual environment.

Content

EN: · Central concepts in CSR
o CSR and sustainable development

o Definitions of CSR

o Why CSR matters – the business case

o Stakeholder salience

· Working with stakeholders

o Political CSR

o Cross-sector partnerships and CSR

o Multi-stakeholder initiatives and CSR

o CSR and human rights

· CSR in company operations

o Human resource management (HRM) and CSR

o CSR and supply chain

o CSR and sustainable consumption

o CSR – minimum wage and living wage

· Examples of CSR

o CSR and communication

o CSR and corruption

o CSR and leadership

o CSR and responsible investment

CSR and social entrepreneurship

EN: LITO course

Prerequisites

EN: The course serves as a capstone, bridging together the other modules in the LITO entity. The course provides an overall picture of business dynamics and explains how the different fields of business studies are related to it. Various tools and services outside the LITO learning platform may be used in the analyses during the course.
It is recommended that before taking this course, the student has taken at least the following LITO courses: 'Introduction to Accounting and Financial Management' and 'Basics of Management and Organisations'. Alternatively, the student must possess sufficient previous knowledge in these fields in order to be able to analyse a business as a whole.

Recommended prerequisites

VA10A1000 Basics of Management and Organisations

VA10A1200 Introduction to Accounting and Financial Management

Learning outcomes

EN: After completing the course, students will be able to:
· describe how different areas in business studies are connected in the entity of enterprise functions and in making a profit

· apply various methods of collaboration in a virtual team and to become aware of the key regularities in the collaborative business environment

· apply different business analysis tools in planning and managing a business and understand the essential role of strategy in the process.

A central part of the course is the optimisation of a business as a whole with respect to both various business functions and goals; students will understand why it is not practical to optimise single functions separately and why the management needs to have a holistic perspective of the company that simultaneously takes into account social, ecological and financial responsibility.

Content

EN: · The foundation for this course is a decentralised and collaborative business simulation exercise in which students work in teams and collaborate with other teams. Besides engaging in real-time decision-making during the simulation days, the students will complete assignments that relate to various business sciences and analyse the actions taken in the simulation outside the simulation days.
· Participation takes place in small virtual groups, the members of which come from different universities.

· The thematic core for the simulation is the entity formed by the different functions of a company and the responsible agency of the company in a network of enterprises. The relevant themes include several areas of cross-company functions (purchasing, project management, distribution and customer relationships) and the reporting related to these topics. The course emphasises the entity of business operations from the perspective of responsible management.

· During the course, students are introduced to the dynamics of business networks where the students' company is part of a network of competitors, suppliers and customers.

· The theoretical material and the exercises distributed on the course are related to the thematic core for the simulation and for other LITO learning themes.

Additional information

EN: The first course period runs from late September to late November 2026 (Weeks 40–47). There is a pre-assignment in Week 40.
The second course period runs from late January to mid March 2026 (Weeks 4–11). There is a pre-assignment in Week 4.

The third course period runs from mid March to mid May 2026 (Weeks 12–19). There is a pre-assignment in Week 12.

Please note that the completion of the course takes place on the DigiCampus learning platform. Login instructions to the platform will be provided via email.

The LITO courses are organised in co-operation with multiple universities. To enable registering credits when the course is completed, it is necessary to transfer data about the student from their home university to the university that is responsible for organizing the course. The data to be transferred consists of: name, gender, nationality, e-mail address, personal identification number and the home university. Data that is classified as secret is not transferred. Without data transfer it is not possible to have the course credits registered.

Study materials

EN: The literature includes: simulation game instructions, a description of the simulation environment, learning videos, a course hand-out and a selection of other articles (to be announced).
